Four scenarios for scoped DPP convergence

Prospective scenarios | unit of analysis: one specified exchange and receiving decision

INSTITUTIONAL RECOGNITION FOR THE SPECIFIED OPERATION

Stronger recognition

Recognised networks

Recognised partners and assessors; manual exchange or version matching still constrains reuse.

Federated evidence corridors

A bounded technical profile and scoped acceptance of issuers, methods, mandates and access.

Limited recognition

Fragmented compliance

Separate records, manual mapping and repeated onboarding; similar labels may carry different meanings.

Connected evidence

Evidence can be transferred and verified; authority, method or acceptance remains unresolved.

Limited **Stronger**

DEMONSTRATED TECHNICAL INTEROPERABILITY

No probabilities, country positions, measured scores or automatic progression are implied.
